Genetic testing in Leonbergers

You have contributed samples to our [research project](#), thank you very much. So far four hereditary diseases were genetically characterized ([LPN1](#), [LPN2](#), [LPPN3](#), [LEMP](#)) and genetic tests developed. More details are available from our respective [websites](#) along with the interpretations of the possible test results.

Lab ID	LB5523	LB6067
Dog	Qinou Love	Bryndis Habika
Kennel	Plateau Bavaois	Verschiet
Reg. ID	LOSH 1190973	NHSB 3120300
Chip ID	972273000427353	528140000719096
Sex	f	f
DOB	12.03.2017	02.05.2018
LPN1	N/N	D/N
LPN2	N/N	N/N
LPPN3	N/N	N/N
LEMP	N/N	N/N

Kind regards

Cord Drögemüller

P.S. The diagnostic tests were carefully conducted using state-of-the-art methodology. Nevertheless, errors cannot be excluded with 100% probability, as there is for example always a very small possibility of novel unknown DNA mutations. We therefore cannot give a warranty on the accuracy of the results. Any liability for subsequent damages in the course of an incorrect test result is excluded. The Internationale Leonberger Union ([ILU](#)) wants to publish the genotypes of tested dogs and please you to forward this letter either by e-mail secretary@leonbergerunion.com or by regular mail (International Leonberger Union, Hein Sibrijns, La Tissière, 03130 Loddes, France).
